Weekly Anti-Clog Page (Inkjet Keep-Alive)

example-file.com · US Letter · true DeviceCMYK

Print this once a week if the printer sits idle. Each patch below fires every nozzle of one ink channel, which keeps ink from drying in the head. Ink used: about 3% of the page. Print at 100% scale, plain paper, normal quality (not draft, not grayscale).

Cyan Magenta Yellow Black

Log (optional)

Date	All four patches solid?	Action taken

Gaps or streaks in a patch = that channel is starting to clog. Print the full nozzle check (nozzle-check-pattern-a4.pdf) and run ONE head cleaning, not several in a row.
