

Large Format Print Test Image

example-file.com · resolution by viewing distance, not by habit

Handheld / 0.5 m brochures, proofs 300 dpi	 A series of 30 vertical black bars of equal height and width, spaced evenly across the row.
Arm's length / 1 m posters, exhibition panels 200 dpi	 A series of 40 vertical black bars of equal height and width, spaced evenly across the row.
Room / 3 m roll-ups, wall graphics 100 dpi	 A series of 80 vertical black bars of equal height and width, spaced evenly across the row.
Street / 10 m banners, hoardings 40 dpi	 A series of 200 vertical black bars of equal height and width, spaced evenly across the row.
Far / 30 m billboards 15 dpi	 A series of 600 vertical black bars of equal height and width, spaced evenly across the row.

Step back to each distance and find where the bars stop resolving. That is the dpi that job needs - supplying more only makes the file bigger and the RIP slower.
