

Print Head Test Image

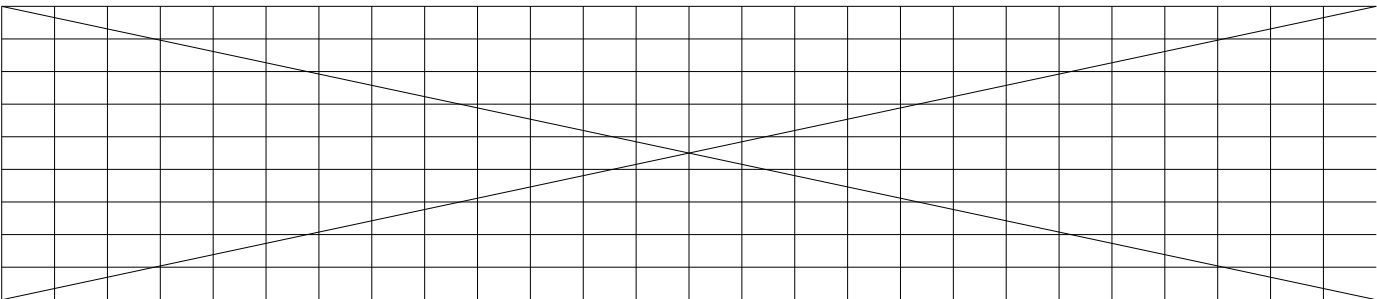

example-file.com · A4 · alignment diagnostic patterns

These patterns expose head misalignment. They do not correct it - run your printer's own head-alignment utility for that, then reprint this sheet to confirm it worked.

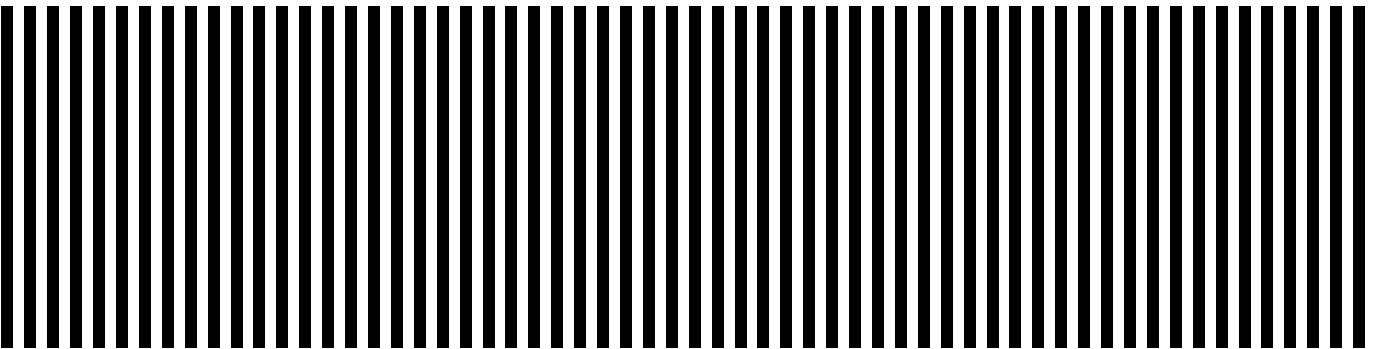

1. Vernier offset pairs — the 0.00 mm pair should look like one line

2. Hairlines — look for waviness, stepping or doubling

3. Bi-directional bands — a seam or blur means forward and reverse passes disagree

4. Fine grid — moiré or ghosting here points at head, not paper feed
